MN.IT CLOUD PORTFOLIO
MONTHLY UPDATE
JULY 2013

Overview
The MN.IT Cloud Portfolio is the group of projects necessary for the next stage of MN.IT's evolution – implementing the MN.IT Tactical Plan. These projects will span the next two years (and beyond) and are a priority for the MN.IT Services organization. Each of the projects in the portfolio is staffed by temporary teams of MN.IT employees and divided into four stages that define and build the plan's cloud services from service strategy to service migration.

June Highlights
- The Data Center project completed, meeting its objective of preparing two facilities for the consolidate workload laid out in the Tactical Plan.
- The EUCC Lync project completed, meeting its objective of making the Microsoft Lync communication and collaboration application available to all state workers by completing an agency-by-agency migration. While the service is available to all state workers agencies, it has not been adopted by all state agencies. An ongoing effort to boost the adoption rate will continue.
- The WAN and Managed Hosting teams began Stage 2: Service Architecture.
- Mobile Device Management completed a draft of the new MDM service description
- The SharePoint team completed the migration to SharePoint 2013 and completed project kick-off meetings with the six agencies that will be migrating from their current on-premise environments.
- All project teams moved from their current work location to new offices at 444 Pine Street.

What's Coming Next Month
- Single Service Desk will begin work on Stage 2: Service Architecture.
- Teams for the Database and Middleware projects will be selected.
- Teams for Mobile Device Management (Stage 3: Service Implementation) and Active Directory (Stage 3: Service Implementation) will be selected.

Issues
- Budget constraints required the release of contracted project managers working on the projects. Existing state project managers will be reassigned to the affected projects.

For Further Information
For additional information, questions, or comments, contact Paul Cavallo, Program Manager.

Portfolio of Projects
The following projects make up the MN.IT Cloud Portfolio:

Active Directory
PM: Jesse Johnson

Data Center
PM: Paul Cavallo

Database
PM: TBD

EUCC Lync
PM: Chuck Tremain

EUCC SharePoint
PM: Dan Kjellman

IP Telephony
PM: Linda Bradley

IT Service Management
PM: Dan Oehmke

Managed Hosting
PM: Paul Cavallo

Mobile Device Management
PM: John Gibson

Middleware
PM: TBD

Single Service Desk
PM: Kirk Breen

Service Level Management
PM: TBD

WAN
PM: Jesse Johnson

Web Content Management
PM: TBD

Workstation Management
PM: TBD
